RG104 E-1 Box 126 Feb-June 1882

Mint of the United States at Philadelphia,

March 10th, 1882.

Dear Sir

In making a settlement of the Melter & Refiners Base Coinage account in July 1879 I discovered a large wastage much too large for the amount of material operated on during the fiscal year just then closed.

On making inquiry I found that in June the supply of copper for alloy had been exhausted and as a new supply could not be procured in time for the gold & silver ingots required to be made 10.000 lbs had to be borrowed from the cent account to be repaid when the copper for alloy arrived. The return of this copper from the alloy account to the cent account by some oversight had never been made.

At the close of the year 1879 the manufacture of bronze planchets by the mint had been discontinued and no settlement of the Melter & Refiners Base Coinage account had been made until December 1881. When a large wastage was again found and explained by the neglect

~~Superintendent.~~
Weight Clerk

An apparently exceptional wastage in the M & R mint coinage a/c, was caused by borrowing 10,000 lbs copper from that a/c for alloy. It has now been returned, & the wastage is all right.

Dear Sir

In making a settlement of the Melter & Refiner's Base Coinage account in July 1879 I discovered a large wastage much too large for the amount of material operated on during the fiscal year just then closed.

On making inquiry I found that, in June the supply of copper for alloy had been exhausted and as a new supply could not be procured in time for the gold & silver engots required to be made 10,000 lbs. lead to be borrowed from the cent account to be repaid when the copper for alloy arrived. The return of this copper from the alloy account to the cent account by some oversight had never been made.

At the close of the year 1879 the manufacture of bronze planchets by the Mint had been discontinued and no settlement of the Melter & Refiners Base Coinage account had been made until December 1881. When a large wastage was again found and explained by the neglect
